

Hydro-Cure® GAC/KDF 1.5 pounds

The Hydro-Cure® cartridge line has now been expanded to include a combination granular activated carbon cartridge and KDF-55. The design and construction are identical to our popular GAC line with the addition of KDF-55 to increase the capacity for chlorine reduction. Chlorine is reduced through an oxidation-reduction reaction giving the cartridge up to three times the capacity of equivalently sized GAC's. KDF-55 is positioned at the inlet portion of the filter in a segregated layer and is retained by an inlet prefilter. Water then passes through a layer of 20 x 50 mesh granular active carbon as a final polish to remove taste and odors. A 20 micron post filter reduces fines.

Custom labeling and filling available. Please consult the factory for pricing.

SPECIFICATIONS:

- Order Number:** S7010-14
- Style:** Upflow
- Micron Rating:** N/A
- Internal Volume:** 42 cubic inches
- Recommended Flow Rate:** 1 GPM
- Operating Temp:** 32°F - 120°F (0°C - 48°C)
- Packaging:** 6/carton
- Carton Weight:** 15 lbs.
- Carton Volume:** 1.10 ft.³
