

Traditional Series

Dual Filtration Drinking Water Systems

Featuring an exclusive manifold plate with patented channel design, the Dual Filtration Drinking Water Systems are designed for undercounter installations or water cooler applications. The Dual Filtration Drinking Water Systems were designed with the concerns of the end user in mind. These systems can be easily installed under the counter with the built-in bracket. No need to take up valuable countertop space. Quick connect fittings make installation and service a snap.

Model TS2F • Filters Included

Two Stages of Filtration

Stage 1 Prefiltration	Stage 2 Taste & Odor Reduction	
<p>The incoming water is filtered through a 5 micron, melt blown sediment removal filter to screen out silt and other particles.</p>	<p>With 42 cubic inches of granular activated carbon, this filter removes chlorine and reduces unwanted tastes and odors to add the final “polish” to your filtered water.</p>	
<p>ORDER NUMBER: S8500</p>		

Model TS2F-NF • Filters not Included

Build Your Own

<p>The TS2F-NF model is sold without filter cartridges. This allows for custom tailoring to specific water treatment applications.</p> <p>As with the TS2F, the TS2F-NF accepts standard 9¾” filter cartridges.</p> <p>A wide variety of filter cartridges are available including granular activated carbon (GAC), carbon block, sediment and ceramic.</p>
